The *9am* Digital Workstation
is a Game Changer

The height-adjustable workstation that cares about your health

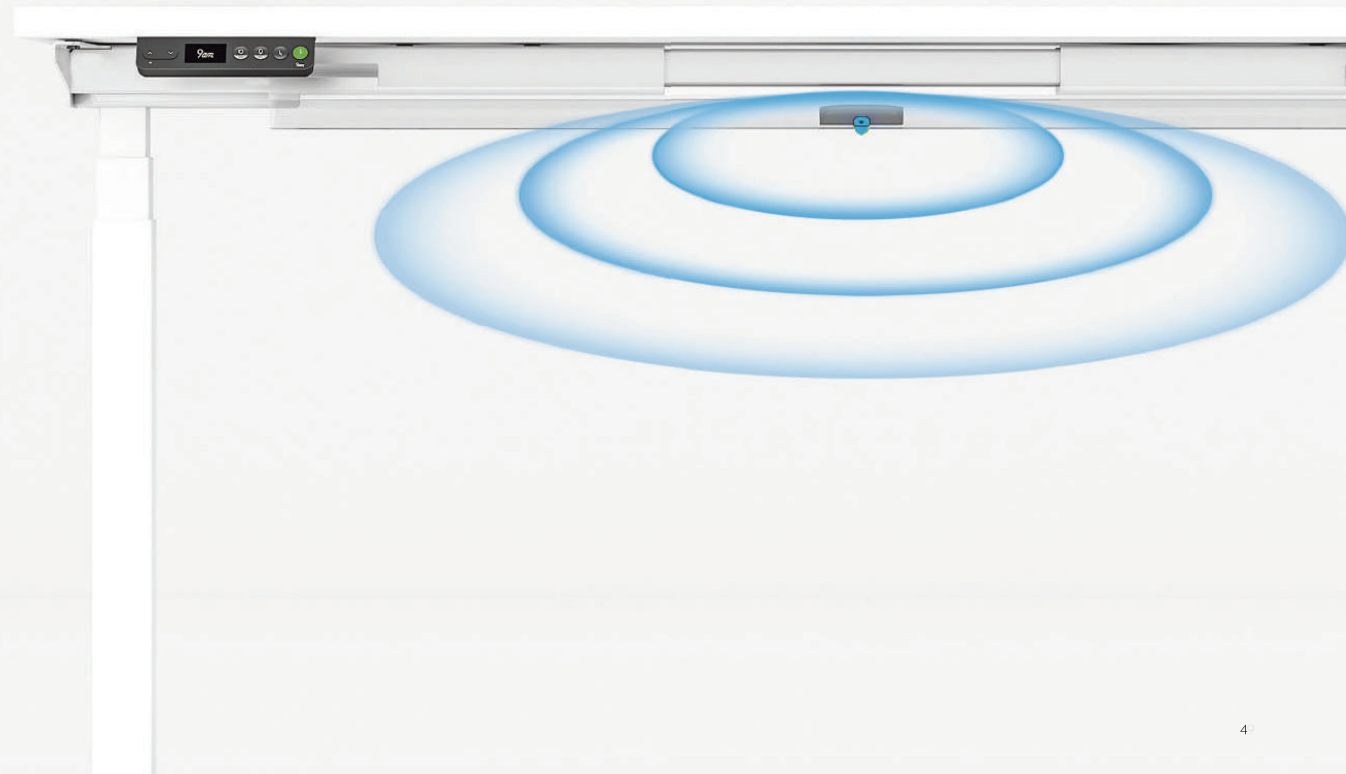

The workstation includes a proprietary human occupancy sensor which detects when you are sitting at the desk and provides immediate feedback to encourage healthy sitting and standing habits. The *9am Digi*™ technology is a digitalized workstation which allows you to analyze the data from your sitting and standing behaviors.

- Millimeter wave radar
- Unaffected by temperature fluctuations
- High penetration power

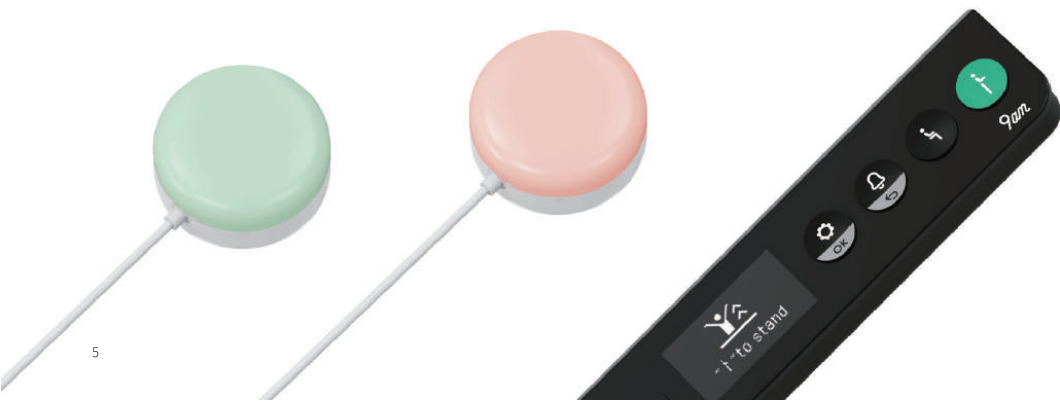

- Dual sensing elements
- Precisely distinguish between human body and objects
- Capable of detecting human at stationary position
- High accuracy: 98%

The workstation will also remind you when you have been sitting for too long

When the sensor detects extended sedentary behavior, the *9am Up* Intelligent Interactive System will remind you when it's time to stand using a combination of screen messages, flicker, and slight vibrations.

5

Simply pat to stand The desk can also raise by itself

You can configure Auto mode through the *9am Up* system and the desk will automatically raise to a predefined height at the appropriate intervals. All you need to do is follow the desk to begin a healthier work routine.
